

UltraCrete's latest innovation successfully installed across Cornwall

Ground-breaking Flow Fix, and several other market-leading highway maintenance materials from UltraCrete, have been successfully installed across multiple sites in Cornwall.

A leading civil engineering contractor, as part of their Highway Maintenance Term Service Contract, have utilised UltraCrete Envirobed® CD534 and M60 bedding mortars, QC10 and QC10 F rapid strength concretes, Instant Road Repair cold lay asphalt, and Flow Fix flowable asphalt repair across the Cornish road network.

On choosing UltraCrete, a civil engineering spokesperson commented: "We use a wide range of materials supplied by UltraCrete as part of the everyday delivery of our highway and civil engineering operations. We've used these products for a number of years and have confidence in the quality of the end product. One key factor for us is the range of materials we have access to which allows us to deal with a range of different repairs."

He continued, "UltraCrete are an easy and mature company to deal with. They promptly and positively respond to feedback or queries and have taken the time over the past 12 months to demonstrate to our workforce the most effective, and correct way, to use and apply their products, which was well received and extremely valuable. As a contractor providing a range of services, we are always interested in new and innovative products and solutions to add further value to our client, this we feel, is completely in tune with the culture at UltraCrete."

With the successful implementation of their revolutionary products, UltraCrete has once again demonstrated its position at the forefront of the highways industry, setting new standards for excellence and innovation.
